

PHISHING AWARENESS TRAINING

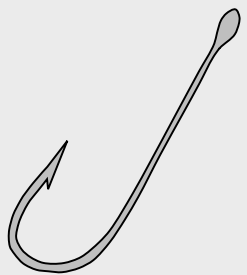

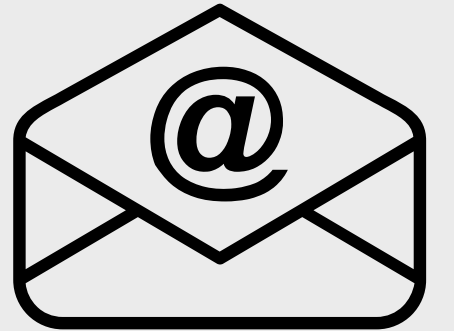

CODE ALPHA CYBER SECURITY INTERNSHIP

By Om Mehra

WHAT IS PHISHING?

- Phishing is a cyber attack used to steal sensitive information.
- Attackers pretend to be trusted organizations or individuals.
- Victims may be asked to provide passwords, OTPs, banking details, or personal information.
- Phishing attacks are commonly delivered through emails, messages, or fake websites.

TYPES OF PHISHING

01

Email Phishing

- Fake emails pretending to be trusted organizations.

02

Smishing

- Phishing through SMS messages.

03

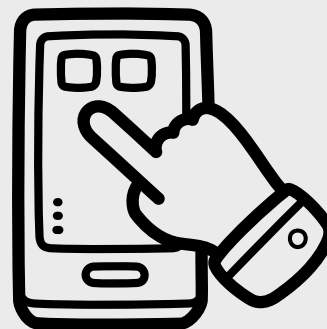

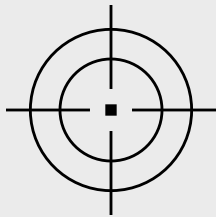

Vishing

- Phishing through phone calls.

04

Spear Phishing

- Targeted attacks against specific individuals.

EXAMPLE OF A PHISHING MAIL

Email Phishing

- Fake emails pretending to be trusted organizations.

Content:-

Subject: Urgent! Verify Your Bank Account

Content:-

Real Website:

www.amazon.in

Fake Website:

www.amaz0n-security.com

Differences:

- Misspelled domain
- Unusual URL
- Fake login page

SOCIAL ENGINEERING

Content:-

Social engineering is the manipulation of people into revealing confidential information.

Examples:

- Fake IT support calls
- Fake job offers
- Impersonating bank officials
- Urgent account verification requests

REAL WORLD EXAMPLE

Content:-

Google Docs Phishing Attack (2017)

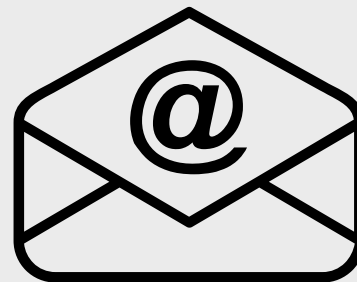

- Millions of users received fake Google Docs invitations.
- The email appeared legitimate.
- Clicking the link granted attackers account access.
- Many users were affected worldwide.

HOW TO IDENTIFY PHISHING

- Check sender email address carefully.
- Verify website URLs.
- Look for spelling and grammar mistakes.
- Avoid suspicious attachments.
- Never share passwords or OTPs.

BEST PRACTICES FOR PROTECTION

Use strong passwords.
Enable Two-Factor Authentication (2FA).
Never share OTPs with anyone.

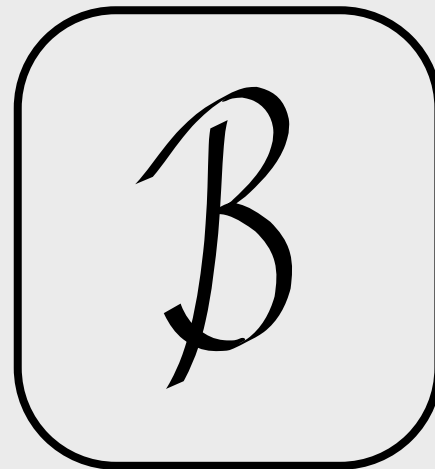

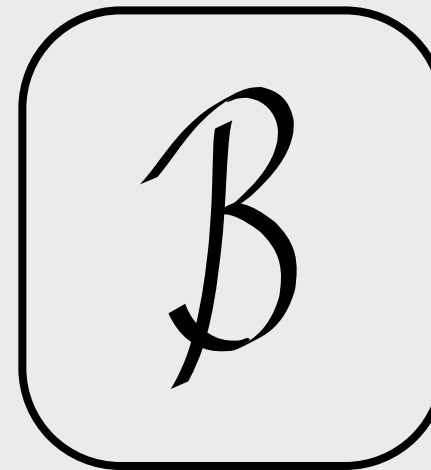

Keep software updated.
Verify requests before responding.
Report suspicious emails.

QUICK QUIZ
